Sempra Energy’s race to build a ship of the global liquefied natural gas export market took another big step forward as the San Diego-based company said it received a key regulatory approval for its Port Arthur LNG project.

The Federal Energy Regulatory Commission formally approved Sempra’s application to construct and operate a liquefied natural gas export terminal, a project that has been under review since 2012. Sempra has told investors it expects the Port Arthur project to be completed around 2024.

The Port Arthur project is in the Port of Beaumont, Texas, and is the latest of the San Diego-based energy company’s major projects. The company has a track record of successfully building and operating liquefied natural gas export terminals and has projects in the United States and Mexico.

Sempra’s move to expand its liquefied natural gas export capacity comes as the global energy market is undergoing significant changes, with a shift toward cleaner energy sources. The Port Arthur project will help meet the growing demand for liquefied natural gas, which is used in the power generation, industrial, and transportation sectors.

Sempra Energy is a leading natural gas and energy company, with operations in the United States, Mexico, and Australia. The company is committed to delivering sustainable energy solutions to its customers and the communities it serves.

The Port Arthur project is expected to create thousands of jobs and generate billions of dollars in economic activity, further strengthening the local economy and contributing to economic growth in the region.

The project is estimated to cost around $10 billion, and Sempra is committed to working closely with local communities and stakeholders to minimize environmental impacts and ensure the project aligns with community values and priorities.

With this approval, Sempra Energy is one step closer to realizing its vision of becoming a global leader in the liquefied natural gas export market, leveraging its expertise, experience, and commitment to sustainability.

NIKE

brand

NOstra Manostr to make waves

NIKE, Inc., the Portland-based sportswear company, is marking the 30th anniversary of its famous "Just Do It" advertising campaign.

But other experts think the strength of Nike's brand and is perceived as more influential than the world's largest sportswear companies are. An ad for the company's "Just Do It" campaign last year showed a woman in a wheelchair raising a dumbbell. And T-shirt with the words "Just Do It." Nike's latest campaign features an image of a man in a wheelchair raising weights. But some experts say the ad isn't as powerful as the original version.

For some, the ad has been a tremendous step in Nike's efforts to diversify its customer base and attract more women. In addition, the ad has helped Nike to engage with consumers and create a sense of community.

Hearings

Googles bows out

"This is an arms race, and that message reaches even more vegans," said Rick Klau, a senior editor at the Wall Street Journal. "It's hard to continue to identify and reduce the amount of meat in the system."

Dorsey said in a statement that the company is "happy to let the market work its way through this problem," and that it is "ready to serve our users as they decide what to do with their data." The company has also stated that it will continue to work with government authorities and other organizations to ensure the protection of user data.
